ClimaConnect Saddle piece for spiral duct

SPECIFICATIONS

- Round saddle piece for spiral duct, 45° version;
- Frame made from Sendzimir galvanized steel (Z275);
- Fitted with a pre-mounted SAFE sealing ring;
- Air tightness class D according to EN 1751 (ATC 2);
- Fixed to the main duct using self-drilling screws and sealant;
- Available in 71 size combinations, Ø100 mm to Ø630 mm.

DESCRIPTION

This spiral duct saddle piece is used to create a 45° branch connection on an existing round ventilation duct, without having to replace the main duct. The saddle piece is fitted onto the spiral duct at a point without a seam, after which the branch duct to be connected is simply slid directly over the saddle piece. Thanks to the pre-mounted SAFE sealing ring, an airtight connection is created with minimal additional installation materials. The saddle piece is available in a wide range of diameter combinations, so you'll find a suitable solution for almost any main duct and branch duct size.

INSTALLATION AND MAINTENANCE

- Fit the saddle piece onto the spiral duct at a point without a seam;
- Secure using self-drilling screws and sealant for a strong, airtight connection;
- Slide the branch duct to be connected directly over the saddle piece;
- Requires no further maintenance; suitable for long-term use thanks to the Sendzimir galvanized finish.

DIMENSIONS

Article number	Ø main duct (mm)	Ø d3 (mm)	l2 (mm)
75041002	100	100	150
